Top Skills

OpenAI Codex
Claude Code
Vertex AI

Certifications

Building with the Claude API
Google AI Professional Certificate

Bryan Chan

Lead AI Platform Engineer at GoBolt
Toronto, Ontario, Canada

Summary

I love cats #, I like badminton , I like snowboarding TypeScript full-stack engineer, 8+ years building warehouse & logistics systems. Now deep in agentic AI — I build production AI agents that review PRs, maintain docs, and run releases, and ship alongside them.

Experience

GoBolt

8 years 11 months

Lead AI Platform Engineer

September 2026 - Present (1 month)

Toronto, ON

- Led engineering-wide enablement on AI-assisted development: presented GoBolt's AI development workflow and trained engineers on Claude Code and agent workflows
- Built and operate a fleet of production AI agents on shared internal tooling: PR review and approval, documentation maintenance, and release automation
- Shipped the company's first LLM-powered feature in the warehouse management system, with a reusable multi-provider LLM integration layer
- Created an agent-maintained engineering knowledge base that keeps itself up to date from releases and team discussions
- Made agentic AI the core delivery workflow: AI-driven testing, releases, and code review
- Built and maintain the internal Claude Code toolkit: shared skills, slash commands, MCP integrations (Linear, Datadog, read-only production DBs), and multi-model routing

Lead Software Engineer

October 2021 - Present (5 years)

Toronto, ON

- Architected and maintain our enterprise warehouse management backend (136+ modules) using NestJS, TypeORM, and PostgreSQL, processing thousands of daily operations across receiving, picking, packing, returns, and carrier transfers
- Designed domain-driven architecture with standardized module patterns, custom auth/permission decorators, and Swagger API docs
- Implemented Generic Inflater Pattern for background processing with distributed locking, automatic retry, and stale item cleanup
- Built Signal Emitter Pattern with two-table design for reliable HTTP request queuing to Core API with automatic retries
- Migrated distributed locking from Redis to a PostgreSQL-based Generic Lock Service, eliminating the Redis dependency
- Led a cross-team data-integrity project unifying product identity across systems, shipped to production with zero incidents
- Led development of our React 18 warehouse frontend (130+ routes, 35+ feature areas) using TypeScript, Vite, Ant Design, and Recoil
- Architected scanner-first mobile-optimized UI for warehouse floor operations with auto-focus input handling and Command+K fuzzy search
- Implemented WebSocket integration for real-time packing with live status updates
- Built multi-step picking/packing wizards, ASN processing flows, and inventory UIs
- Designed state management: Recoil for global state, React Query for server cache, URL params for shareable flow state
- Managed Kubernetes deployments across 8 environments with Helm charts and ArgoCD GitOps
- Implemented secrets management with SOPS encryption and KMS integration

- Integrated DataDog APM with custom decorators for performance monitoring and error tracking across all services
- Established testing patterns: FactoryBot unit tests, DB-fixture integration tests, Playwright E2E, Storybook visual regression

Lead Frontend Developer

December 2018 - November 2021 (3 years)

Toronto, Canada Area

- Introduced react hooks and formalized them into our codebase
- Introduced typescript into our codebase
- Introduced styled-components and replace SASS from our codebase
- Introduced npm packages for both web(react) and mobile(react-native) components
- Introduced react-query into our codebase
- Built a react app for our vehicle routing system with google map api
- Introduced RecoilJs into our system and replace Redux. Reducing 60% of our boilerplate code

Full Stack Engineer, Senior Software Developer, Team Lead

November 2020 - October 2021 (1 year)

Toronto, Ontario, Canada

- Built a new app with NestJS (typescript backend framework) for our warehouse inventory management system
- Deployed the app on Amazon elastic beanstalk
- Architects and DB designs
- Built a new ReactJs frontend interface for our warehouse system
- Built server-less AWS lambda functions to query secondary database
- handled concurrency issues with locks
- Built an access management app. Team leads can give access to their members for a specific feature

Frontend Developer

January 2018 - December 2018 (1 year)

Toronto, Ontario, Canada

- Introduced Redux into our main site and solved the prop drilling problem
- Implemented progressive data loading on our management tool to improve performance
- introduced SASS into our codebase
- Built and deployed our first react-native app for our operations team

- Built our business site from scratch with react

Frontend Developer (Intern)

November 2017 - December 2017 (2 months)

Toronto, Ontario, Canada

- Updated site footer on our main site
- Implemented stripe element with react on the site

Education

University of Toronto

Bachelor of Applied Science - BASc, Computer Engineering
